Education

De La Salle University Expected Graduation: Aug 2028
Bachelor of Science in Computer Science, Major in Network and Information Security *Manila, Philippines*

Experience

ING Hubs Philippines Oct 2026 – Present
Java Engineer Intern

- Built a Java Spring Boot REST endpoint for rebatching bank transactions on a real-time payments team.
- Ran daily SQL and Jupyter Notebook reconciliation reports on hundreds of GBs of transaction and balance data, surfacing discrepancies for the finance team.
- Fixed bugs and shipped features in Java and SQL services alongside senior Java engineers in an Agile team with daily standups and sprint retrospectives.

DeckTradr Apr 2026 – Sep 2026
AI & Brand Design Engineer

- Annotated datasets and trained machine learning models for optical character recognition (OCR), image recognition, and AI-based card condition grading, improving scanner accuracy by over 30%.
- Conducted QA testing across iOS and web builds for a TCG point-of-sale and inventory management system.
- Automated marketing workflows with Claude for AI-generated content and TCG price-trend analysis.

Yergoods (Yerkoo) Apr 2026 – Jul 2026
Full Stack Shopify Developer

- Engineered a custom JavaScript Web Pixel within Shopify's sandbox for accurate purchase and conversion tracking.
- Integrated Shopify with Google Merchant Center, Google Ads, and Google Analytics.
- Analyzed multi-platform data to optimize checkout conversions, contributing to a 56% increase in total sales.

La Salle Computer Society Oct 2024 – Aug 2026
Associate Backend Engineer

- Architected the backend infrastructure for ArcherBytes, an academic resource platform for 20,000+ DLSU students, using Next.js and PostgreSQL.
- Designed Drizzle ORM database schemas for content types, user reactions, and community features.
- Implemented Better Auth with Google sign-in restricted to DLSU accounts.

Projects

Parc Fermé | *Python, XGBoost, scikit-learn, pandas, GitHub Actions* Apr 2026 – Present

- Built an XGBoost ranking model, trained on 2022–2025 race data, that predicts F1 finishing order and each driver's win, podium, points, and DNF odds after qualifying.
- Runs live every race weekend via GitHub Actions since mid-2026; correctly predicted 78% of podium finishers, beating the 56% from simply using the starting grid.

VibeCheck | *Python* Aug 2026

- Built a hybrid SAST + DAST scanner in Python that audits AI-generated ("vibe-coded") web apps, flagging hardcoded secrets, unauthenticated routes, and weak JWT configuration.

Technical Skills

Security: Linux (Kali), TCP/IP, Wireshark, Nmap, Nessus, Burp Suite, Metasploit
Frontend: JavaScript, TypeScript, React, Next.js, Tailwind CSS, HTML5/CSS
Backend: Java, Spring Boot, Python, Node.js, SQL, PostgreSQL, FastAPI, Express.js, NestJS, Prisma, Drizzle, REST, JWT
DevOps & AI: Git, GitHub Actions, Azure DevOps, Azure, Docker, TensorFlow, NumPy, pandas, scikit-learn, Jupyter, GitHub Copilot, Claude Code
Payments: Real-Time Payments, ISO 20022, SEPA Credit Transfer, SEPA Direct Debit
